Winter storms can impact animal health as well as human health. Pets exposed to prolonged cold and wind chills increase their risk for cold-related illnesses. Prepare now to protect your pets during winter storms.

**Before the Winter Storm**

- Stock up on food for your pet.
  - In the event of road closures, be sure to have extra food available for your pet.
  - If your pet is on continual medications, have at least a two-week supply on hand.
- Identification.
  - All pets should have some sort of identification (collar with tag, microchip).
  - Take a photo of the pet and keep it with the medical records.
  - Include any proof of ownership materials (e.g., registration, proof of purchase, adoption records, microchip information).

**During a Winter Storm**

- Bring your pets inside immediately.
  - Bring pets indoors, into the house or garage, to provide warm shelter.
  - Keep pets away from any alternate heating sources being used to avoid burns.
- If you can’t bring them inside,
  - Provide adequate shelter to keep them warm.
  - NEVER leave your pet chained outside or enclosed in a way they cannot escape danger.
  - Pets that live outdoors should be fed a bit more in the winter because they need the extra calories to stay warm.
  - Remember to provide fresh water and ensure that the water does not freeze.
  - Check often to make sure that access to food and water is not blocked by snow drifts, ice or other obstacles.
  - Use a plastic dish to prevent your pet’s tongue from freezing to a metal bowl.
- If your pet goes outdoors,
  - Most long-haired or full-coated dogs do fine in winter with just their own, natural coats.
  - Shorter-coated dogs need a dog coat to protect them from the wind, snow, and cold.
  - Check their paws upon their return to make sure that ice is not building up between the toes, or that salt or ice melt is not irritating the skin.
  - Never leave your pet alone in the car for prolonged periods during the winter. Your car can become a freezer quickly.
  - Check underneath your car’s hood for small animals (like cats) that may have crawled inside seeking warmth.

**Winter-Related Illnesses**

Prolonged exposure to low temperatures, wind or moisture can result in cold-related illness for pets.

- If any of these conditions are suspected, SEEK VETERINARY CARE IMMEDIATELY!
- Antifreeze.
  - Ingesting anti-freeze can be fatal for your dog or cat. If you spill some, soak it up immediately.
- Frostbite.
  - Pets can get frostbite very easily on the ears, tail and paws. If your pet goes outdoors, be aware of the temperature and wind chill.
  - Signs may not be immediately obvious and may not show for several days.
  - Signs: white, waxy or pale appearance to extremities (e.g., toes, nose, ears, tail); skin is cold and numb with loss of feeling; sloughing of skin.
- Hypothermia.
  - Occurs when the core body temperature drops to a level at which normal muscle and brain functions are impaired.
  - Pets can become hypothermic after being in cold temperatures for long periods of time or from being wet in cold conditions.
  - Signs: extreme shivering • slow, shallow breathing, • gums may be pale or blue, • animal may be unresponsive
  - Warm the animal’s body SLOWLY and start with the body core first, NOT the extremities.
  - Do not give the animal anything HOT to drink. Warm broth or food is better.
